

DOUBLE SKIN MODULAR AIR HANDLING UNIT

Round Edge (ADM-AHU)

ACSON
International
Air Conditioners

AIR HANDLING UNIT

Acson Double Skin Modular Air Handling Unit is designed based on a modular concept, making it suitable for breaking down into multiple section and assemble on site. It also have a wide range of air flow rate for up for selection, ranges from 700 up to 52622 CFM. While the total static pressure can go up to 2000 Pa (8" W.G.). High strength extruded aluminum is use to optimize strength to weight ratio, now comes with round edge for thermal break profile. Our double skin comes in 2 options, 25mm or 50mm thickness.

Model: ADM 0404 - 2539

Cooling Capacity: 1,369 - 52,622

Refrigerant: R22, R410A & Chilled Water

Common Features

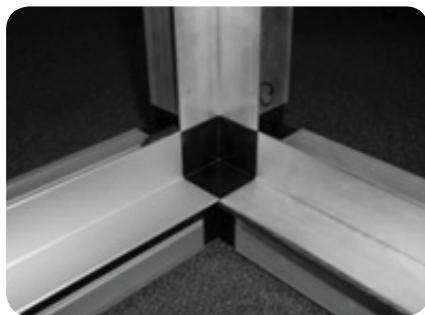

Eurovent Certification

Acson Air Handling Unit 50mm panel model is Eurovent certified. Eurovent Certification certifies the performance ratings of airconditioning and refrigeration products according to European and international standards. The Certification Mark guarantees that the products have been submitted to independent checking and that they have been accurately rated.

Casing / Cabinet Construction

Acson Air Handling Unit is designed in accordance BS EN 1886. It is constructed of maximum 2.0mm high strength extruded aluminium pentapost and internal post with double modular skin insulation material. The patented frame channel design allows three identical pieces to be bolted together to form a composite corner piece. The unit wall is made up by Double Skin Polyurethane foam (PU) 25mm or 50mm insulation panel with 0.5mm high strength pre-painted steel as external skin and 0.5mm galvanized steel (GI) as internal skin.

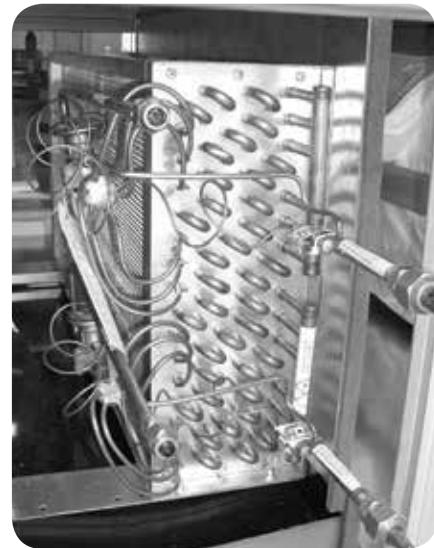

A Complete Line Of Accessories For Maximum Flexibility

With the modular paneling concept design, each unit can be configured to help you make the best possible use of your available space. Depending on its length, each shipping section can accommodate one, two, three or more components such as dampers, coils, filters or other accessories, giving you the opportunity to select a very compact unit that makes the most out of limited space. Or, if space is not at a premium, you can create a large clearance between components for a better accessibility during maintenance. All ADM Air Handling Units are designed from computer selection to help assure maximum performance from coils and fans.

Coil

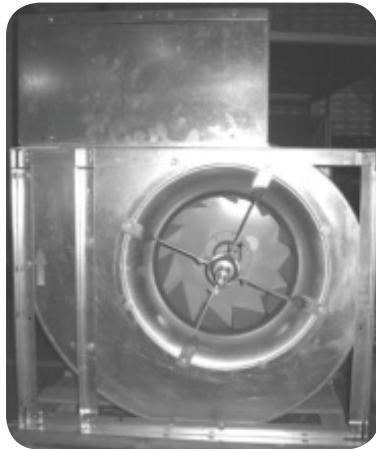

Acson Air Handling Unit can be used for either chilled water system or direct expansion system application. Coils are designed based on application to meet the requirements.

Common Features

Fan

Each model of ADM Air Handling Unit has forward curved, backward curved & aerofoil fans for selection. With that, it will have the most wide range combination to achieve maximum performance for any requirement. Fan performance of all these fans have been tested and measured in accordance to AMCA standard 210.

Spring Or Rubber Isolator

"The fan in a AHU can create substantial vibration that will transform to panels / casing and consequent widespread generation of sound waves. To avoid this, the spring or rubber isolator is mounted between the fan compartment and the rest of the AHU to prevent the transmission of noise and vibration into panels.

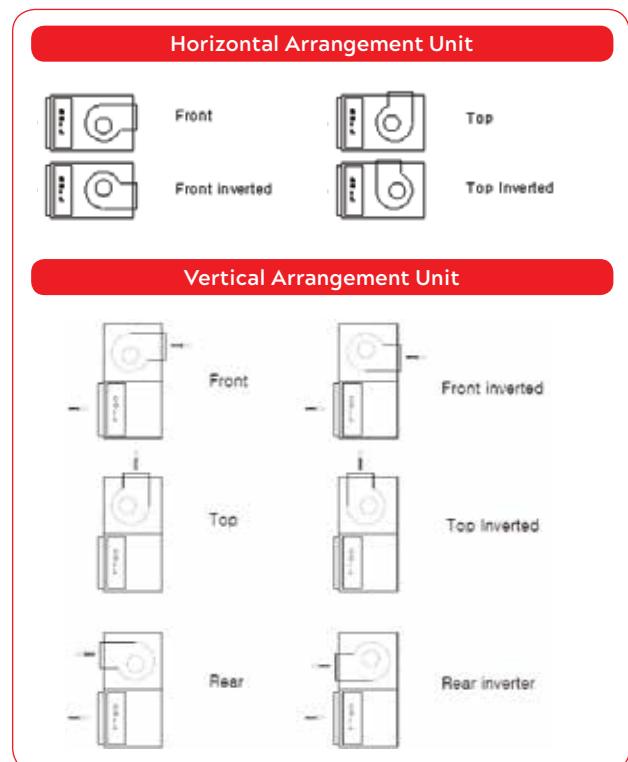

There are two types of isolators are used:

- Rubber mounting (for blower <= model 355)
- 25mm deflection spring (for blower > model 355)"

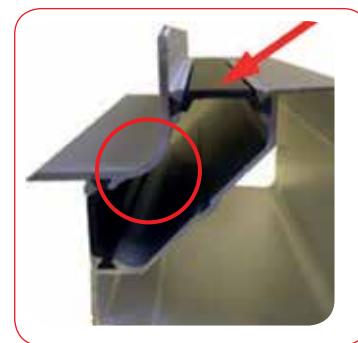

Discharge Direction

These are two discharges direction: vertical and horizontal discharge. The fan discharge should be square (for both forward or backward curved fans) in area and flanged and isolated from the casing by the fire retardant grade flexible connection. Only one fan discharge is provided.

Round Edge Profile

The latest improvement on the internal profile from square to round will make cleaning the internal compartment much easier.

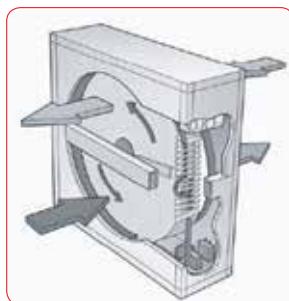

Optional Add Ons

VFD/ Frequency Inverter

A VFD provides adjustable speed control of a single fan motor. Normally, an AHU which has been installed by VFD can vary the frequency within 30 to 60 Hz in order to control the motor rotation speed. It also provides protection for the motor operation.

Heat Recovery Wheel

It is constructed of aluminium coated with heat transfer material (silica gel or others) which is rotated by an electric motor at constant or variable speed. It can reduce the capacity of ventilation equipment. Furthermore, heat wheels can work at lower temperature without frosting occurs. The benefit includes recover both latent and sensible heat by allowing reduction in system capacity about 30 to 65%. The most significant benefit is to prevent sick building syndrome.

Humidifier

It is a device which is used to increase the air relative humidity in atmosphere without steam source. It is a constant temperature humidifier. Its principle is the common electrode humidifier regulates the generated steam by the way of controlling water level and electrical current.

Electrical Heater

It is used to achieve desired room condition at certain desired relative humidity. With negligible air pressure drop, accurate controllability, light weight, easy serviceability and inherent freeze protection, electrical heater is valuable alternatives to conventional steam and hot water heating coils.

Peace of Mind Service

With nationwide service points, there must be one around you to provide fast and reliable service when assistance is needed.

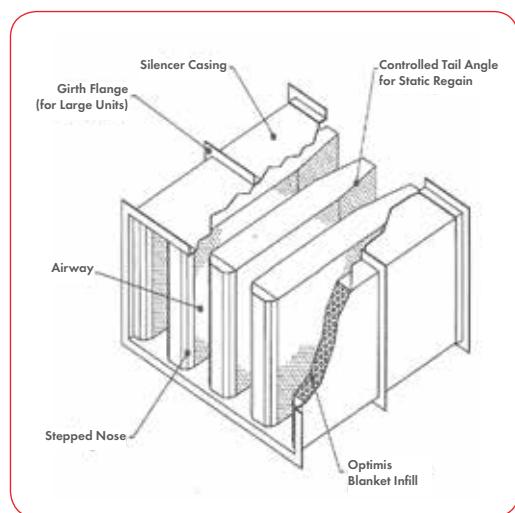

Mixing Box

It is an air inlet section to mix fresh and return air according to the system designer's requirement. It can regulate the amount of outside and return air supplied to the conditioned space.

Sound Attenuator

Sound level will be an essential factor to be considered as one of the performance of units. Acson product has been designing to provide the lowest sound level. Different attenuator length can be selected to meet the most stringent sound attenuation requirements. A comfortable surrounding enhances human's working and living life.

Other optional accessories like UV Light, Differential Pressure Gauge, Incandescent Lamp & View Port are available upon request.

* Please refer to our warranty policy

EC FAN

ELECTRONICALLY COMMUTATED FAN

Acson is proud to announce that our Air Handling Unit now is able to be fitted with Electronically Commutated Plug Fan (EC Plug Fan). It boast better efficient (higher than IE4), lower noise emission, compact yet robust and much more. Now it is up for selection for model with total static pressure of 1800 Pa and below.

Basic AHU Information

- AHU Modular Concept Design
- Model Range - DM1 (1"), DM2 (2") and DM2TB (2")
- Standard Model Range : 1 to 22m³/s
- Air Volume Range : 1 to 22m³/s
- Total Static Pressure Up to 1800 Pa

Technology Features

- | | |
|---|--|
| <ul style="list-style-type: none">■ Unrivalled Compactness■ High Efficiency■ Robust Design■ Economical Operation | <ul style="list-style-type: none">■ Low Noise Emissions■ Low Vibration Level■ Long Service Life■ Reliable Operation |
|---|--|

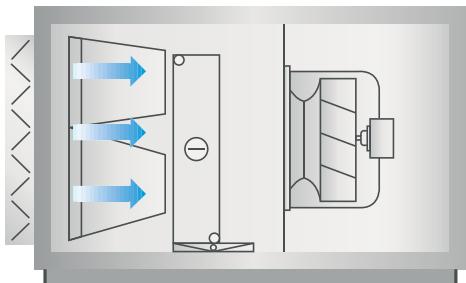

Savings

- Save on Space - Smaller AHU size
- Save on Components - Inverter, Sine Filter, Premium Motor, Shielded Cable, Motor Protection
- Save on Cost - Installation & Maintenance Cost

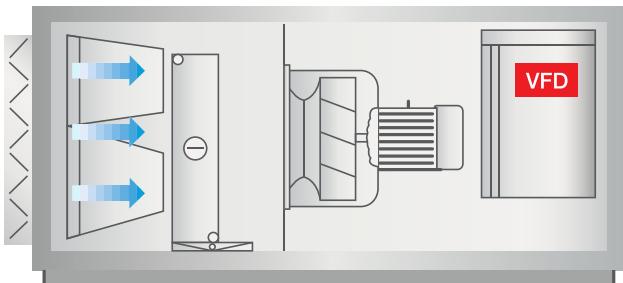

Solutions To Your Fan Woes

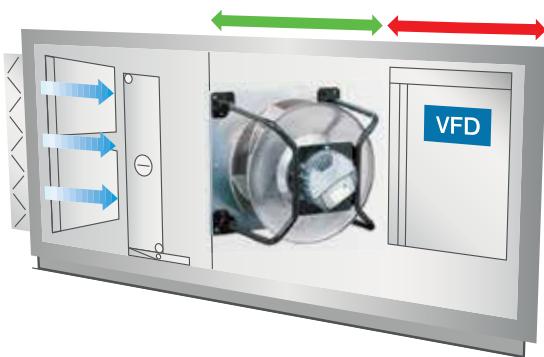

EC Fan (Our Solution)

Fan+Motor+VFD (Conventional Fan Solution)

Why EC Fan?

- Save on Installation Cost
- Save on Space
- Save on Components

- No Inverter
- No Sine Filter
- No Premium Motor
- No Shielded Cable
- No Motor Protection

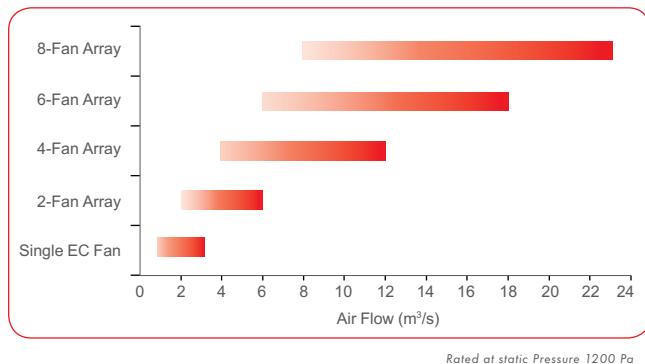

Benefits of Using Acson EC Solution

Fan Array

Table 7: Horizontal Typical Configuration Type 1 & 2

Note:

1. Please add 100mm for model using coil (8 Row & above)
2. The dimensions are subject to change without any notice for future improvement.
3. Dimensions in mm.
4. Please add 50mm length on the individual section width, depth and height if using the 50mm insulation panel.
5. For blower model 1250, section size will be 2600.*

b. Vertical Typical Configuration

| Model | 0404 | 0407 | 0410 | 0413 | 0707 | 0710 | 0713 | 0715 |
