COOLROW PRECISION

AIR CONDITIONER

Precise and Reliable Cooling

ACSON® International

Air Conditioners

COOLROW PRECISION
AIR CONDITIONER

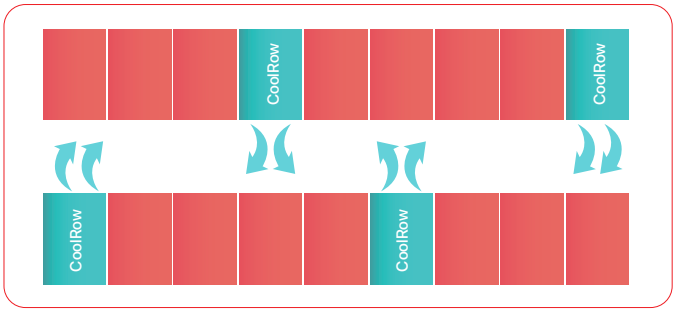
Acson CoolRow is a compact design precision air conditioner designed to couple with multiple air flow (hot or cold air) in order to improve air circulation and efficiency. CoolRow are integrated in the rows of server racks that greatly enhance air distribution and taking cooling directly to the heat load.

Application

- High density data center
- Computer room or single cabinet which thermal load is more than 5kW
- Container data center
- Modular data center
- Low Power Usage Effectiveness (PUE) data center

Typical Applicable Scenes and Illustrations for CoolRow

Example 1



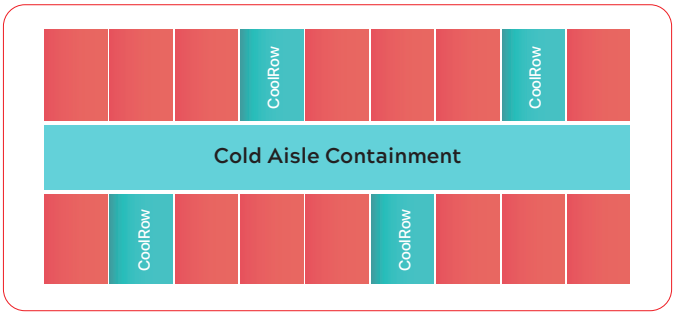
Example 1: Data center with cabinets face–to–face and back–to–back layout

Face-to-face and back-to-back cabinets formed hot and cold aisles, CoolRow can evenly distributed at each row of server cabinets. Hot air is absorbed from hot aisle; cold air will be released to the cold aisle after modulation. An "air barrier" is formed when CoolRow is arranged at the beginning of each row that can lower the streaming of hot or cold air. This application is relatively simple and easy for implementation.

Example 2: Self–contained cold aisle data center (confined space)

As CoolRow installed in each row of racks that arranged in face-to-face and back-to-back, it seal the front cabinet's space (air inlet side). Therefore, CoolRow absorb the hot air from hot aisle and release the cold air to the closed space to form a cold aisle containment.

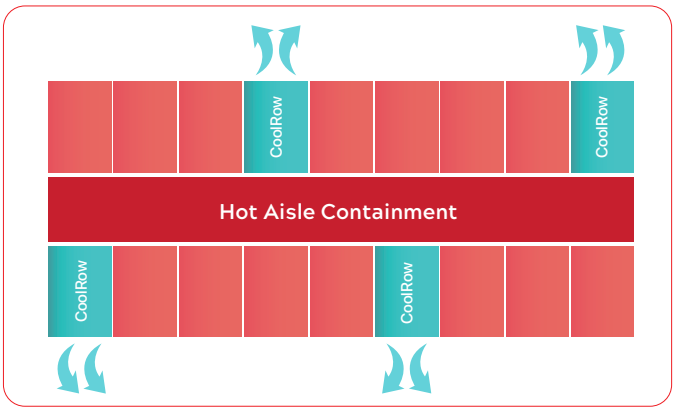
Example 2



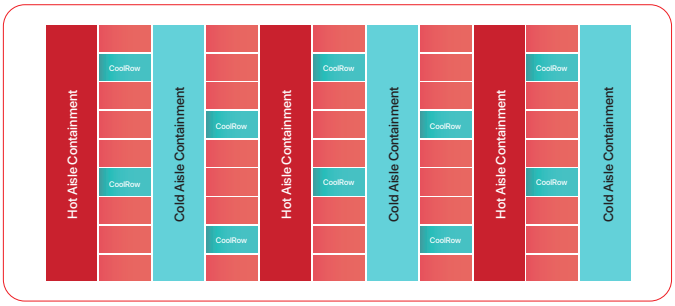
Example 3:
Self-contained hot aisle data center (confined space)

This Example work in the similar way as Example 2 with the opposite way of arrangement where the Cool Row absorb hot air from the hot aisle containment and release cold air outward.

Example 3



Example 4



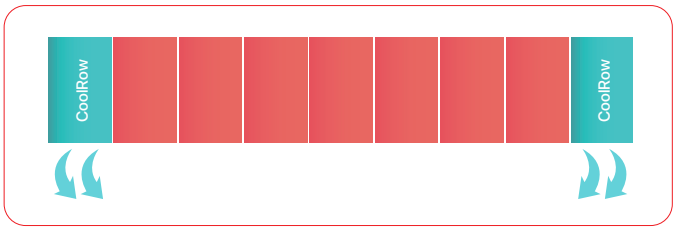
Example 4:
Self-contained hot and cold aisle data center (confined space)

This Example combined the features of Example 2 and Example 3 that seal the front and back of cabinet's space in order to form cold and hot aisle containment. Therefore, a totally enclosed data center is formed that enable the cooling capacity to be fully utilized.

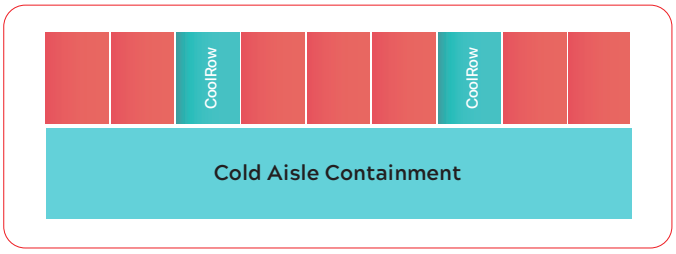
Example 5:
Single row cabinet data center

It is preferably to arrange CoolRow at the beginning of the row for data center with one single row of cabinet only. This arrangement is good for "air barrier" formation that could lower down the hot and cold air streaming which is relatively simple and easy to be implemented. At the same time, it is suitable for operating data center that require capacity expansion and hot spot transformation.

Example 5



Example 6



Example 6: Single cabinet and Cold Aisle containment data center (confined space)

On the basis of Example 5, it seal the cabinet's front space in order to form a cold aisle containment to isolate the cool aisle from hot aisle that could maximize the utilization of cooling capacity. It could evenly distributed at the highly heated cabinet that beneficial for return air flow. This Example making full use of cooling capacity that is relatively energy-efficient.

*All pictures shown are for illustrative purposes only and may differ from actual product.
The above scenarios are typical scenarios for CoolRow, other scenarios are not listed due to limited space.

Features

Diversified

- Cooling capacity: Air-cooled/Water-cooled 12.5kW-60kW; chilled water 30kW-70kW.
- Functions: Cooling only, Cooling + electric heating type, Constant temperature and constant humidity.
- Cooling method: Air-cooled, water cooled* and chilled water.

*There are 2 types of water cooled condensing heat exchangers (shell and tube heat exchanger & plate heat exchanger) that can be installed outside of data center to prevent direct contact of cooling water with data center. The specification of CoolRow air-cooled and water-cooled indoor units are similar.

High-efficient and full coverage of fan system

- Uniform air flow with multiple fans distributed.
- Hot-swappable design, easy maintenance.
- Fans operate at the optimum efficiency instead of maximum rotating speed.
- Energy efficiency and redundancy can be achieved at the same time.

Elegant outlook and easy to be install

- Two sets of connectors are reserved for top and bottom piping (piping can be select at the job site).
- Depth of cabinet body is consistent with the common cabinet (1100mm).

Flexible air supply

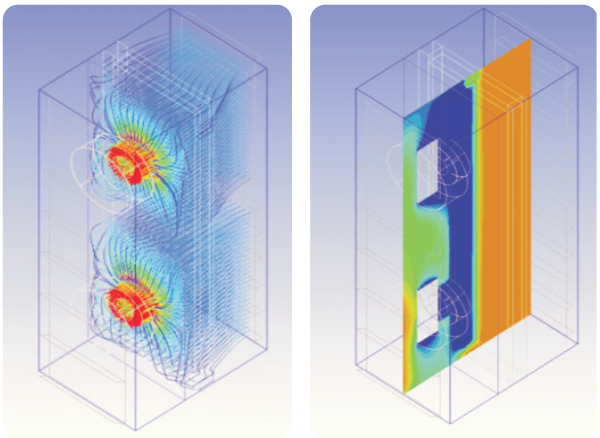
- Standard configure model implements forward air supply mode which is suitable for cold aisle containment application.
- Guide grille can be configured at the job site to adjust the air supply direction.

Efficient

- High performance: able to handle high temperature return air.
- High efficiency: short air circulation path.
- High sensible heat ratio: sensible heat ratio could achieved 100% which matches with the equipment in fully sensible heat state.

Advanced and reliable control system

- Up to 16 temperature sensors can be connected (temperature data of cabinet can be collected to calculate the cooling capacity requirement).
- Automatic diagnosis function.
- Standard configure RS485 communication interface and remote monitoring access.
- Configured with external custom alarm interface (e.g: fire alarm).
- 7-inch HD touchscreen display; 3-inch button-operated LCD (optional).
- Historical temperature and humidity curve display
- Optional: Electric heater, electrode humidifier, condensate pump, dual power input component.



CFD visualization illustrates the airflow and temperature field within the equipment cabinet.

Specifications

CoolRow Air Cooled and Water Cooled type

Model				A5PCR012	A5PCR025	A5PCR035	A5PCR040	A5PCR045	A5PCR060
Air Discharge Direction				REAR AIR RETURN AND FRONT AIR SUPPLY (DEFAULT MODE). A DIRECTION ADJUSTABLE GUIDING PLATE CAN BE CONFIGURED ON SITE TO IMPLEMENT FRONT, LEFTWARD, RIGHTWARD AND BILATERAL AIR SUPPLY MODES.					
Nominal Cooling Capacity			BTU/hr	42,600	85,300	119,400	136,400	163,700	204,700
			kW	12.5	25.0	35.0	40.0	48.0	60.0
Sensible Cooling Capacity			BTU/hr	42,600	85,300	119,400	136,400	163,700	204,700
			kW	12.5	25.0	35.0	40.0	48.0	60.0
Power Source			V/Ph/Hz	380 ~ 415 / 3 / 50
