A5MWC-BR
CHILLED WATER FAN COIL UNIT

Chilled Water System Hydro Technology

Acson Chilled Water System could use air or water to cool down the refrigerant circuit. The cooled refrigerant is then circulated to a Brazed Plate Heat Exchanger (BPHE) where heat exchange will take place to cool down the water or glycol laced water. The chilled water is then circulated to the Fan Coil Unit (FCU) to cool desired place.

*Picture is for illustration purpose only.

Common Features

✔ Long Piping Applications

Unlike normal Direct Expansion system with constraints in piping design and installation, Acson Chilled Water System allows for long piping application by correct pump sizing. All refrigerant circuit is within the system making it no risk of leakage in building and no oil return issue.

✔ Partial Loading

Acson Chilled Water System is designed with two or more separate refrigerant circuits with multiple compressors. By doing so, the unit has part load capabilities. This will improve the reliability and energy efficiency especially during low loading operations.

* Mini Chiller - Applicable for A(4)MAC80~150C, A5AC30~55CR, A5MAC30~150ER

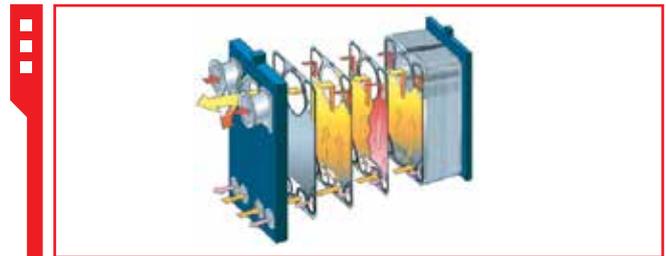

** Modular Chiller - Applicable for A5MAC210D~3360D, A5MAC230D~3680D, A5MACY230E~3680E, A5MAC340D~5440D, A5MAC450D~7200D, A5MWC20~320BR, A5MWC30BR~480BR & A5MWC40~640BR

✔ Time and Cost Saving

As the unit is fully assembled in the factory and pass through a series of stringent quality control and assurance processes, mind is rest assured when installing the system. Refrigerant is also precharged to reduce the hustle of field charging and cost saving.

✔ Brazed Plate Heat Exchanger

The heat exchanger is made of AISI 316 stainless steel plates closely arranged and brazed together to maximize heat exchange for higher efficiency.

✔ R410A

Environmental friendly R410A refrigerant system with zero Ozone Depletion Potential (ODP) is available upon request.

✔ Compact Size

The Chilled Water System is so compact that it can be integrated perfectly with any architectural design, making it an ideal choice for house, office, restaurant and shop.

Air Cooled Modular Chilled Inverter E-Series (VRA)

Model:
A5MACY 230E

Cooling Capacity:
66 kW to 1056 kW

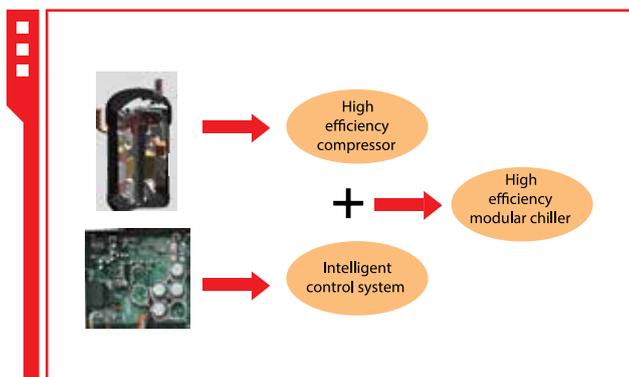

Refrigerant:
R410A

Acson is committed to offer the new high efficiency inverter air-cooled modular chiller that meets the challenging need of today's market. With advanced technology, it combines both the benefits of R410A refrigerant and inverter in 1 united body. It is proper designed to provide the best coefficient of performance by option of using variable speed compressor instead of fixed-speed compressor to ensure the end product is compatible with various applications. Air-cooled Modular Chiller Inverter E Series is surely a people oriented solution for the next generation.

Features

✓ R410A leading-edge Inverter Technology

By advanced DC inverter technology, it provides the outstanding energy efficient performance. The module is equipped with a DC inverter compressor and fan motor, as well as intelligent inverter control system. The inverter driven feature multi speed driven compressors precisely match their output capacity according to load requirement, so that the module is always maintain at optimal energy efficiency operation.

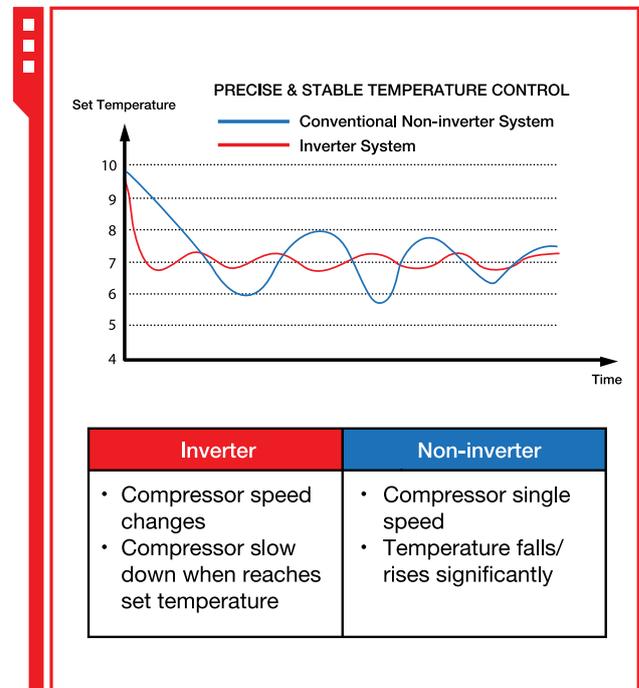

✓ More Efficient

R410A inverter air-cooled modular chiller adopts the extreme DC inverter Hermetic Scroll Compressors technology. Significantly greater efficiency with IPLV as high as 4.36 and COP up to 3.38, it is making a new breakthrough in energy saving.

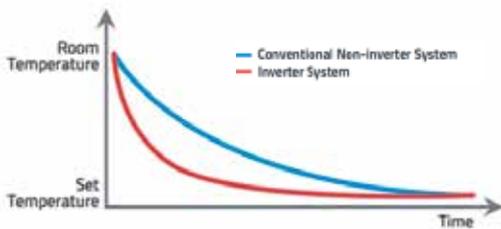

✓ Precise Temperature Control

The unique Inverter keeps room temperature stable by controlling the compressor at variable speed with minimum temperature fluctuation. Thus, each unit auto adaptive to real capacity needs for a high level of comfort.

✓ Rapid Cooling

Ultmost operation performance shorter cooling time

Inverter	Non-inverter
<ul style="list-style-type: none"> • Maximum compressor speed when turned on • Reaches set temperature faster 	<ul style="list-style-type: none"> • Fixed compressor speed • Time to reach set temperature depend on heat gain

✓ Low Inrush Current

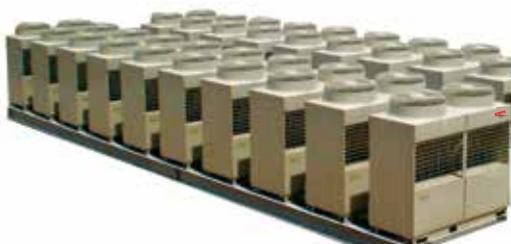

Inverter driven compressor requires lower starting torque which features soft start to ensure a smooth ramp up profile without withdrawing high current. This aspect avoid peak fluctuation that potential to harm sensitive equipment and no need of expensive additional components for power factor correction.

Starting Current reduce

✓ Expandable Capacity

The beauty of modular design feature new levels of unit compact in size and configuration which facilitates flexibility in expands of capacity for building extension by arbitrary combination up to 16 units to cater to additional cooling requirements.

✓ Redundant Operation

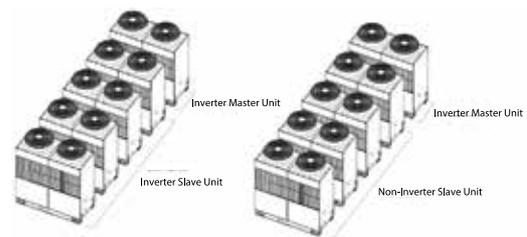

Redundancy feature back up capacity and capabilities to continue to run given a component failure. Fault of any unit can be isolated for service and will not affect the normal operation of other units.

✓ Diverse System Solution

Fully inverter modules
[Inverter master unit + N × Inverter slave unit]

Mix modules
[Inverter master unit + N × Non-Inverter slave unit]

✓ Supply Fresh Air Regulation

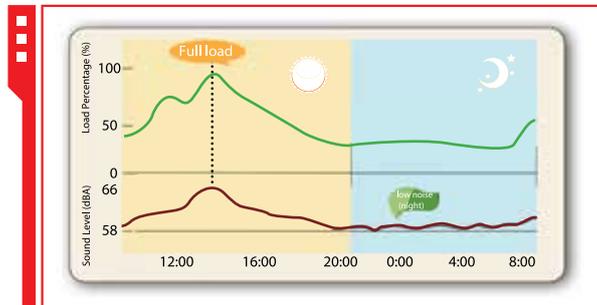

Able to couple with different Air Handling Unit (AHU) and Fan Coil Unit (FCU) which fresh air can be easily introduce from outside and extract stale air to the outside thus improve Indoor Air Quality (IAQ).

✓ Relative Humidity Control

Control of temperature and relative humidity can be achieved precisely by adding accessories such as heating coil, electrical heater and Precision Air-conditioner.

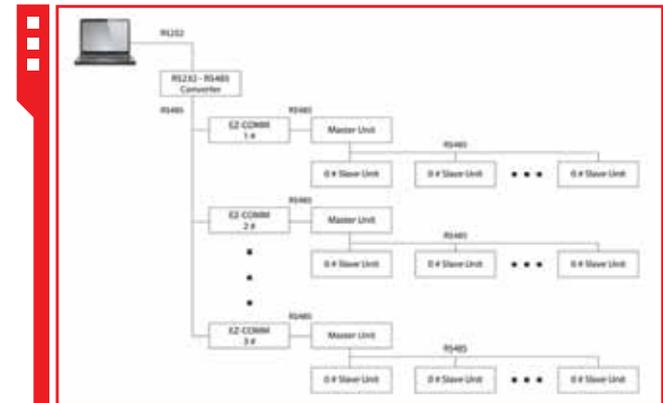

Practically Silent Operation

The inverter sound performance introduces sound level as low as 58dBA with respect to conventional unit. At part-load conditions, typical at the night, the inverter device adjust speed variation to have lower sound levels than conventional on-off compressor systems in both running and start-up periods.

Ez-Comm for ModBus Communication (optional)

The Ez-Comm is a data converter that coordinates Acson modular chiller unit control system and controls inter-system communications based on the ModBus communication protocol. It automatically converts the internal communication protocol of Acson modular chiller unit into the ModBus communication protocol to ensure that the unit is connected to the BAS system that is based on the ModBus RTU communication protocol and uses the RS485 communication mode.

	A5MAC 1260D	A5MAC 1380D	A5MAC 2040D	A5MAC 2700D

Low Noise Operation

The specially designed spiral blades ensure smooth air flow, significantly reducing the turbulence and lowering sound level.

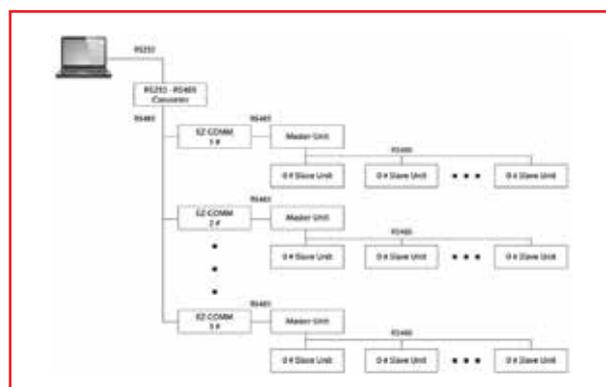

Intelligent Control System with Safety Protection

An user friendly intelligent control system is built into the modular chiller. Microchip and large-scaled LCD display are employed to make the control swift and easy. The modular chiller is equipped with a series of safety control including the high/low pressure switch to ensure safe operation .

Ez-Comm for ModBus Communication

The Ez-Comm is a data converter that coordinates Acson modular chiller unit control system and controls inter-system communications based on the ModBus communication protocol. It automatically converts the internal communication protocol of Acson modular chiller unit into the ModBus communication protocol to ensure that the unit is connected to the BAS system that is based on the ModBus RTU communication protocol and uses the RS485 communication mode.

Note:
 A5MAC 340D & A5MAC 450D ModBus is built-in.
 A5MAC 210D & A5MAC 230D is optional.
 Please consult us for more details.

Water Cooled Modular Chiller Series

Model		A5MWC 020BR-320BR	A5MWC 030BR-480BR	A5MWC 040BR-640BR
Cooling Capacity	kW	69 - 1104	101 - 1616 110 - 1760 (High EER Model)	140 - 2240 145 - 2320 (High EER Model)
Refrigerant		R410A		

Features

Modular Design

The modular chiller allows for combination of up to 16 base modules unit where each module can be connected to form a much larger system.

Base Module	A5MWC 20BR	A5MWC 30BR	A5MWC 40BR
Modular Chiller B Series	A5MWC 40BR	A5MWC 60BR	A5MWC 80BR
	A5MWC 60BR	A5MWC 90BR	A5MWC 120BR
	A5MWC 80BR	A5MWC 120BR	A5MWC 160BR
	A5MWC 100BR	A5MWC 150BR	A5MWC 200BR
	A5MWC 120BR	A5MWC 180BR	A5MWC 240BR

*Arbitrary combination up to 16 modules

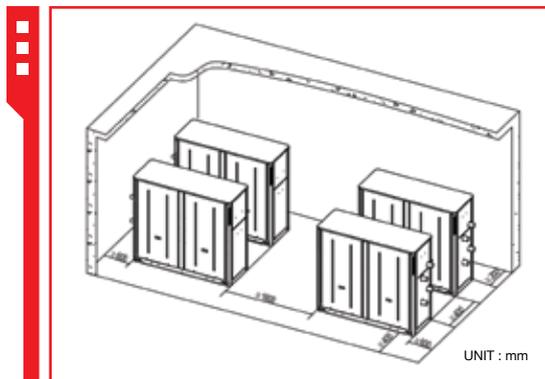

Reliable Operation

The fault of any compressor or the maintenance and care of any unit will not affect the normal operation of other units.

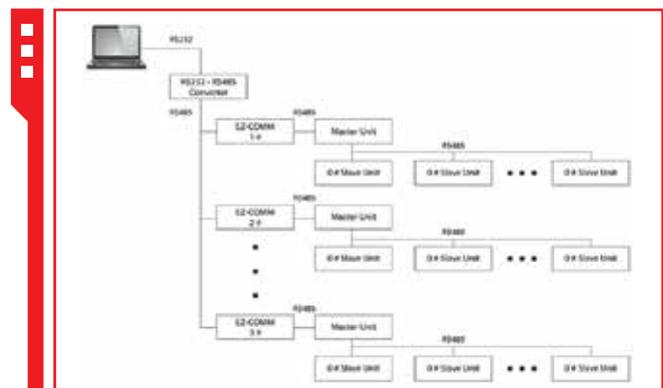

Change Whenever Need

It is unnecessary to fix the central air-conditioning equipment for one time to be certain combination. Instead, other modules and corresponding equipment can be added as required by the growth of the occupants. It helps to save the initial investment and the operation cost.

Ez-Comm for ModBus Communication

The Ez-Comm is a data converter that coordinates Acson modular chiller unit control system and controls inter-system communications based on the ModBus communication protocol. It automatically converts the internal communication protocol of Acson modular chiller unit into the ModBus communication protocol to ensure that the unit is connected to the BAS system that is based on the ModBus RTU communication protocol and uses the RS485 communication mode.

A5MWC 20BR - A5MWC 120BR

	Charge	kg (lb)	5.8 (13)	11.6 (26)	17.4 (38)	23.2 (51)	29 (64)	34.8 (77)

Arbitrary combination up to 16 modules

Notes:

- Unit dimension is taken assuming units is stacked front facing the back and with installation clearance
- Nominal cooling capacity are based on the conditions below:

Criteria		Cooling
Evaporator	Leaving Water Temperature	7°C
	Nominal Flow Rate	0.172 m ³ /h.kW
Condenser	Entering Water Temperature	30°C
	Nominal Flow Rate	0.215 m ³ /h.kW

- Nominal water flow rate and pressure drop is based on series installation method.
- All specifications are subjected to change by the manufacturer without prior notice.

Features

✓ All in One Unit

The mini chiller is fully integrated and equipped with key hydronic components such as expansion tank, water tank, brazed plate heat exchanger and water circulating pump. The all in one concept will ease the job of installation.

✓ Protection

■ Anti-Freeze Heater

The BPHE (Brazed Plate Heat Exchanger) has a strip heater around it to prevent it from water freezing.

■ Anti-Freeze Sensor

Signal is sent from the anti-freeze sensor to cut out the compressor if the water temperature becomes too low to prevent BPHE from frosting.

■ Water Pressure Differential Switch

This protection feature will ensure there is water flow in pipings when the chiller is in operation. Otherwise, the compressor will cut out immediately.

This unit is also equipped with a series of other protections like:

- High & low pressure switches
- Discharge temperature sensor
- Compressor, water pump & fan motor overload protector
- Pressure relief valve

✓ Power is Nothing Without Control

An user friendly and versatile is equipped with every mini chiller.

- Whole system configuration
- Unique parameter settings
- Operation status display
- Tracing fault record (quick troubleshooting solutions)
- 8-lines graphical LCD display
- Menu selection

*Not compatible with A5MAC-ER Series

Notes:

- Unit dimension is taken assuming units is stacked front facing the back and with installation clearance.
- Unit have built in water pump and expansion tank. However, strainer, safety valve, water filling valve and wired controller need to be install on site.
- Nominal cooling capacity are based on the conditions below:

Mode		Cooling
Evaporator	Leaving Water Temperature	7°C
Condenser	Ambient Temperature	35°C DB / 24° C WB
Nominal Flow Rate		0.172 m³/h.kW

4. All specifications are subjected to change by the manufacturer without prior notice.

Chilled Water Fan Coil Units Line-up

A wide range of fan coil units ranging from residential use to industrial application is available for different needs. Each model comes with their own unique features and advantages.

The available chilled water fan coil units are:

- Wall Mounted JW
- Ceiling Cassette CW/ EW Series
- Ceiling Mounted EW Series
- Ducted Blower BW Series
- Ducted Blower FW Series
- Ceiling Concealed VW Series
- Ceiling Concealed CW Series
- Ceiling Concealed GW Series
- Ceiling Concealed FWD Series
- Double Skin Ceiling Concealed CW Series

✓ Power is Nothing Without Control

SLM9

The Chilled Water Fan Coil Unit is supplied with SLM9 micro computer thermostat as standard wired controller. This wired controller comes with a LCD screen with every information of the unit easily visible. It is adapted to fan coil and electromechanical valve's control.

*Applicable for certain model

Entering Water Temperature	7°C
Leaving Water Temperature	12°C

2. Sound measurement position is 1.4m and up to 1.5m below the face center of the air return of the unit.
 3. All specifications are subjected to change by the manufacturer without prior notice.

Casing	Colour	LIGHT GREY						

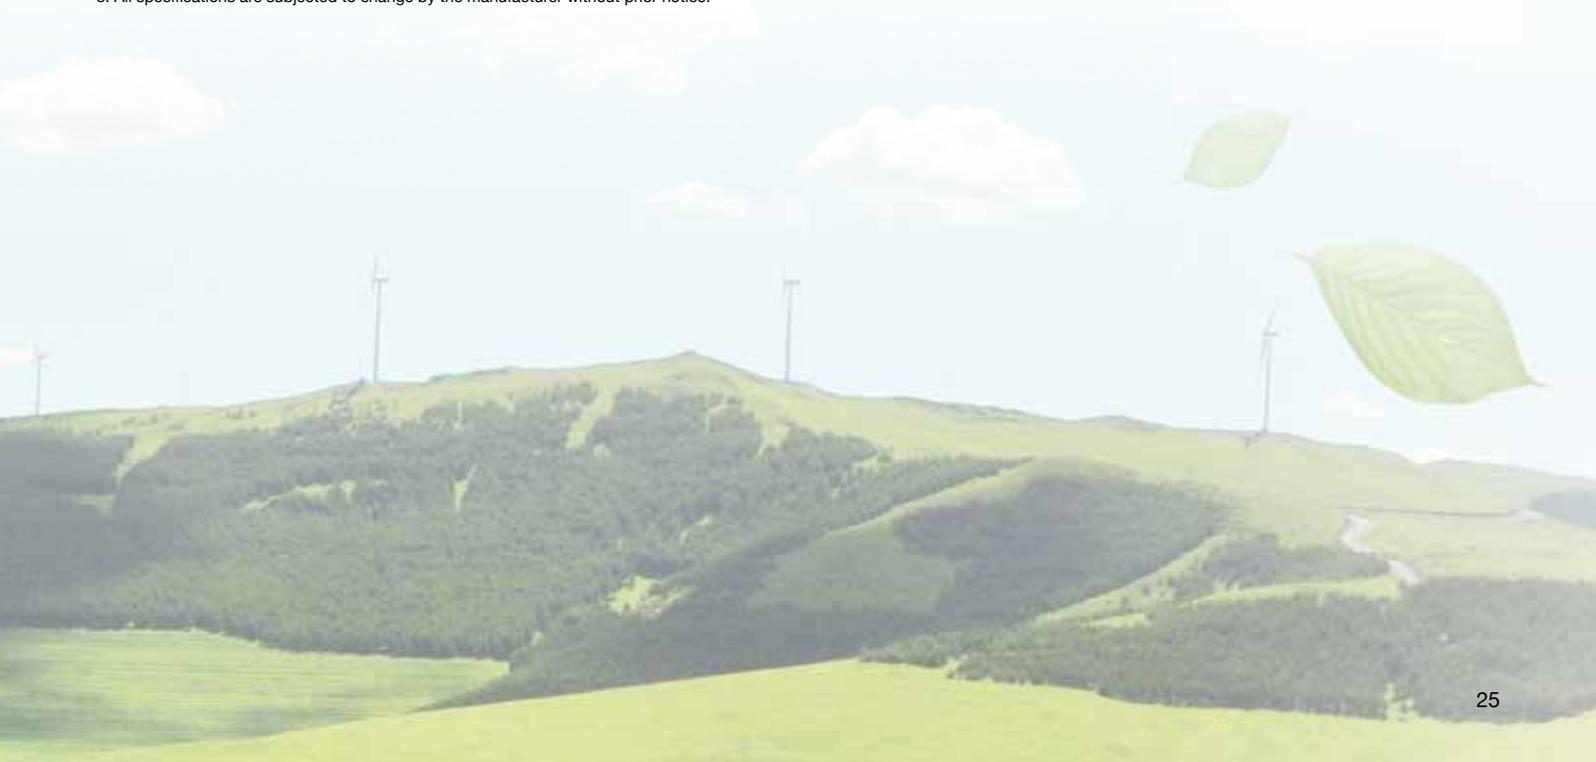

Notes:

1. Nominal cooling capacity are based on the conditions below:

Mode	Cooling
Entering Air Temperature	27°C DB / 19°C WB
Entering Water Temperature	7°C
Leaving Water Temperature	12°C

2. Sound measurement position is 1m in front of the unit and 0.8m up to 1m below the air discharge opening.
 3. All specifications are subjected to change by the manufacturer without prior notice.

Notes:

1. Nominal cooling capacity are based on the conditions below:

Mode	Cooling
Entering Air Temperature	27°C DB / 19°C WB
Entering Water Temperature	7°C
Leaving Water Temperature	12°C

2. Sound measurement position is 1.5m below the centre of the unit with 2m length duct at the air discharge outlet and 1m length of duct at the air return inlet.
 3. All specifications are subjected to change by the manufacturer without prior notice.

Condensate Drain Pipe Size	mm (in)		31.75 (1 1/4)		
Pipe Connection	Type		BSP FEMALE THREAD ADAPTOR		
	Size	mm (in)	63.5 (2 1/2)		
Filter	Type		G3		
	Quantity	pcs	1		
Casing	Colour		WITHOUT PAINT		

Notes:

1. Nominal cooling capacity are based on the conditions below:

Mode	Cooling
Entering Air Temperature	27°C DB / 19°C WB
Entering Water Temperature	7°C
Leaving Water Temperature	12°C

- 2. The external static pressure is inclusive of a flat Grade 3 filter contribute a pressure drop of 88 Pa.
- 3. The unit weight stipulated are net weight, operating weight will increase approximately 20%.
- 4. The sound pressure level value is estimated and the position is 1 m below and after the supply duct.
- 5. All specifications are subjected to change by the manufacturer without prior notice.
